

Hello!

My name is Nikolay, I am a FrontEnd Developer with 3 years of experience in development. I possess skills in working with frontend libraries/frameworks such as React, Vue, Next, Redux/RTK, Bootstrap, Tailwind, Material UI, Multer, Nodemailer.

I also have experience working with Express, Axios, Nest, PostgreSQL, Sequelize. In development, I've utilized technologies like Git, Node, and TypeScript.

I've worked on projects related to relocation, insurance, and healthcare, participating in app concept development and UI design. My most recent significant commercial project was a website for selecting destinations/countries for relocation.

I developed a calculator to determine a list of countries based on criteria, implemented user account logic, and performed layout according to design. For visual styling, I employed both pure CSS and Tailwind components.

My latest personal project involved creating a website for writing, storing, and editing guitar tablatures. I designed the entire website and its logic, and integrated an external API.

I would be glad to arrange a call to discuss the vacancy and my experience this week. Please let me know which day would be convenient for you.
